Intelligent service for smarter decisions

The MaxiSmart™ service is an intelligent software addition to your Maxi Sky 2™ ceiling lift. With *MaxiSmart* you can now maximize the usage of your lifts, increase the cost-effectiveness of your investment, ensure better usage compliance, and plan your resources better. The *MaxiSmart* service keeps you informed so that you can make the decisions that matter.

Keep track of your Maxi Sky 2 ceiling lift investment

The *Maxi Sky 2* ceiling lift is an investment in the latest ceiling lift technology, so it is important to see that the ROI is actually realized. The addition of *MaxiSmart* intelligence, and its user friendly digital presentation, allows you to calculate the ROI on your investment, track the usage of equipment, optimize the equipment per ward or department, and optimize resource planning based on stored information.

The *MaxiSmart* service ceiling lift even provides you with asset management solutions. Firstly the data provided gives you critical service information so that you can implement timely maintenance, and secondly you can optimize your investment by swapping lifts from low to high usage areas. Both these solutions optimize and extend the life of your ceiling lifts.

Maximize usage to minimize the risks

Ensuring that lifts are used to transfer and turn patients prevents unnecessary risks to both caregivers and patients. Caregivers who neglect to use ceiling lifts run the risk of back injuries. Similarly manual transfers and turning can exacerbate sores or lead to skin shearing causing pain for the patient. The *MaxiSmart* software helps you to analyze data across your facility, by ward and by ceiling lift. This enables you to compare usage between similar wards, and take training or resource planning decisions to ensure maximum usage.

The unique overview and comparison views built into. The *MaxiSmart* screen presentation can be invaluable in ensuring that your facility is complying with moving and handling regulations. The *MaxiSmart* software also provides you with useful historical data that underlines and supports the quality of your care.

**“ Now, I can compare
usage vs work related
injuries and decide on
actions**

The *MaxiSmart* service is great at keeping your clinicians and head nurses informed, so that they can take decisions on care plans and allocating resources. The *MaxiSmart* service empowers your management team to identify where the equipment is being used, but also where it is not being used. They can then compare the data with sick leave, injuries and other key data.

Gain better access to care plan usage & compliance

Receiving accurate feedback on how lifts are being used in the care process helps to ensure care plans and safe transfer procedures are followed to prevent manual handling and back injuries due to heavy lifting. Spotting early on where training is needed helps to increase the efficiency of transfers and reduce absenteeism due to back injuries.

Receiving accurate feedback on how lifts are being used in the care process helps to ensure care plans and safe transfer procedures are followed to prevent manual handling and back injuries due to heavy lifting.
